Chapter 6: Securing Microservices on Kubernetes

The screenshot shows the Docker Hub interface for the repository `g1g1/py-kube`. At the top, it indicates "Using 1 of 1 private repositories." and provides a [Get more](#) link. The navigation tabs include **General**, Tags, Builds, Timeline, Collaborators, Webhooks, and Settings. A red arrow points to a lock icon next to the repository name, with a red text label above it stating "Private repositories have a lock icon". Below the repository name, it says "This repository does not have a description" with an edit icon. The "Last pushed" time is "19 hours ago". On the right, under "Docker commands", it instructs to "To push a new tag to this repository," and shows a code block with the command: `docker push g1g1/py-kube:tagname`.

Chapter 13: Service Mesh - Working with Istio

The screenshot shows the Google Cloud Platform interface for configuring a Kubernetes Engine cluster. The top navigation bar includes the Google Cloud Platform logo, the user name 'delinkious', and a search icon. The main header shows 'Kubernetes Engine' and 'Clusters' with navigation options: EDIT, DELETE, DEPLOY, and CONNECT. A left sidebar lists navigation categories: Clusters, Workloads, Services, Applications, Configuration, and Storage. The main content area is titled 'Add-ons' and lists several settings:

- Kubernetes dashboard**: Enabled
- HTTP load balancing**: Enabled
- Istio (beta)**: Enabled
- Istio mTLS (beta)**: Permissive
- Cloud Run on GKE**: Disabled

Google Cloud Platform **delinkciuous**

PROVIDER

- Amazon Web Services (1)
- Aqua Security (1)
- Banzai Cloud (2)

Aqua Security Operator
provided by Aqua Security, Inc.

The Aqua Security Operator runs within Kubernetes cluster and provides a means to

AWS Service Operator
provided by Amazon Web Services, Inc.

The AWS Service Operator allows you to manage AWS

Camel K Operator
provided by The Apache Software Foundation

Apache Camel K (a.k.a. Kamel) is a lightweight integration

CockroachDB
provided by Helm Community

CockroachDB Operator based on the CockroachDB helm chart

Community Jaeger Operator
provided by CNCF

Provides tracing, monitoring and troubleshooting microservices-based

Couchbase Operator
provided by Couchbase

The Couchbase Autonomous Operator allows users to easily deploy, manage, and maint.

Crunchy PostgreSQL Enterprise
provided by Crunchy Data

PostgreSQL is a powerful, open source object-relational

Dynatrace OneAgent
provided by Dynatrace LLC

Install full-stack monitoring of Kubernetes clusters with the Dynatrace OneAgent.
